

HPV Vaccine Quality Improvement Study Weekly Run Chart Report

Practice ID:	18		
Baseline Period:	Feb 2017-Jan 2018	Date of Data Pull:	1/28/20
MOC Project Periods:	Feb 2018-Jan 2019	Data through:	2020 Week 1

How to Interpret Your Weekly Run Charts

Higher is Better: For all of the measures in this report, the desirable direction is upward (increasing).

Goal: The default goal for each measure is 80%. If your practice would like to change the goal for a specific measure, submit a VHealth technical support ticket.

Look for Patterns in Your Data: It is normal to have random movement of your weekly data up and down around the median during the Baseline Period (gray area). Here are examples of patterns that are not random (see figures*):

- 1) **Shifts:** At least 6 consecutive points that all occur above or below the median line
- 2) **Trends:** At least 5 consecutive points all going in an upward or downward direction regardless of what side of the median line they are on
- 3) **Astronomical Data Point:** An outlier data point that stands out as unusually high or low from the overall average or median value

Baseline Period (gray area): Look for shifts or trends that may represent seasonal patterns (e.g., summer, flu season) or when major changes happened in the practice. You may see similar seasonal patterns in the next year. You can compare data across years in the table under the chart. If you see any astronomical points, think about if there was an unusual event that caused it.

MOC Projects Period (white area): While working on your MOC projects, during the “Study” phase of your PDSA cycles, look for new patterns in your weekly data.

- When you see an upward shift or upward trend, these patterns may mean you are making an improvement. Continue to monitor your data to see if you hold these gains over time.
- If you do not see improvements, or if your data go down, it may be helpful for your team to revisit and adjust your plan then do additional PDSA cycles. Also think about any special circumstance during those weeks that may have interfered with the plan being fully implemented, such as a provider being on vacation or an unusually heavy volume of flu visits.
